Priority Payments

Features and functionality of Priority Payments versions:

Priority Payments delivers a complete, end-to-end solution for customer payment management. The module supports the reception of payments through various advanced methods, including credit cards, Bit, and bank transfers, compatible with any platform, worldwide, and in any currency. Utilizing the Priority Payments module enhances the efficiency of the collection process, significantly saving time and offering customers a modern and streamlined payment experience.

Priority Payments is accessible to all Priority users on version 18.3 or higher, with each subsequent version introducing new features and enhancing functionality. To fully utilize Priority Payments capabilities, users are required to operate through the Priority WEB interface. SaaS customers can deploy Priority Payments without the need for extra technical prerequisites. For those utilizing an On-Premise system, access to the Priority Payments is available immediately after the Gateway Service installation.

Upgrade today to benefit from improved payment tools and enhanced functionality.
